        

    |  |        <u>IPE COVER LETTER</u> <u>COMMENT AND RESPONSE REGISTERS</u> May 27, 2016

Mr. Greg Fabun, Flood Program Manager West Sacramento Flood Control Agency 1110 West Capitol Avenue, 2nd Floor West Sacramento, CA 95691

Subject:City of West Sacramento, Urban Level of Flood Protection – Review Conducted byIndependent Panel of Experts in Association with Finding of Adequate Progress

Dear Mr. Fabun:

The Urban Level of Flood Protection Criteria published by the California Department of Water Resources in November 2013 requires the City of West Sacramento (City) to commission an Independent Panel of Experts (IPE) to review any reports prepared by a Professional Civil Engineer registered in California which serve as evidence that an urban level of flood protection can be achieved. For flood management facilities protecting 500 residents or more, this IPE shall consist of at least three experts with different expertise, including at least one with expertise in hydrology and hydraulics, and at least two with expertise in the design and construction of facilities relevant to those under review. Finally, selection of this IPE shall be consistent with U.S. Army Corps of Engineers (USACE) Engineer Circular (EC) 1165-2-214 dated, December 15th 2012, following the procedure for Type II Independent External Peer Review to the extent applicable.

The undersigned meet these Urban Level of Flood Protection Criteria requirements for serving on an IPE and have participated as approved Type II Independent External Peer Reviewers for the West Sacramento Levee Improvement Program since 2009. At the written request of the West Sacramento Area Flood Control Agency (WSAFCA), the undersigned agreed to serve as the IPE and review the reports developed to serve as evidence that an urban level of flood protection can be achieved for the City. This review was conducted using current levee design guidance including, but not limited to, the California Department of Water Resources Urban Levee Design Criteria (ULDC) dated May 2012.

Between March 7th and May 25th 2016, the undersigned conducted a thorough review of two reports prepared by Wood Rodgers, Inc. to serve as evidence that an urban level of flood protection can be achieved for the City. The first report was the draft <u>City of West Sacramento</u>,

<u>Flood Engineering Services, Problem Identification Report</u> dated January 2016. The second report was the draft <u>City of West Sacramento, Flood Engineering Services, Alternatives Analysis</u> <u>Report</u> dated March 2016. The review of each report was documented through development of a comment, response and back-check spreadsheet. As of May 25th 2016, all IPE review comments were closed pending verification of the responses in the final published reports. The final IPE comment and response spreadsheet associated with the review of each report will be incorporated into each final report.

Based on a review of the Draft Problem Identification and Alternatives Analysis Reports, the undersigned, serving in the capacity of an IPE, concur that an urban level of flood protection from the identified sources of flooding *will exist* for the City upon implementing the improvements recommended to address the identified flood management facility deficiencies as outlined in these two reports.

REVIEWER					RESPONDENT						REVIEWER				
COMMENT NUMBER	REVIEWER NAME/ AGENCY	LOCATION IN REPORT/DOC	DATE OF ORIGINAL REVIEW COMMENT MM/DD/YY	ORIGINAL REVIEW COMMENT	RESPONDENT CONTACT INFO	DATE OF RESPONSE MM/DD/YY	RESPONSE	CONCUR NON-CONCUR	FIO	CLOSED Y/N	DATE MM/DD/YY	BACK CHECK COMMENT (Needed Only If NOT Closing Comment)			
1	Eric Nagy / MBK	v Figures	4/5/16	Recommend including one or more figures that describe the typical erosion repairs or improvements recommended through this report.	Jesse Patchett / Wood Rodgers	4/12/16	The requested figures will be added to the report	х		Y	5/3/2016				
2	Eric Nagy / MBK	Page 1, § 1, ¶ 2	4/5/16	Bifurcation of the City is accomplished by both the DWSC which extends to the eastern side of the Port facilities and the Barge Canal which continues east from this point to the Sacramento River.	Jesse Patchett / Wood Rodgers	4/12/16	The Barge Canal will be included in this sentence.	x		Y	5/3/2016				
3	Eric Nagy / MBK	Page 2, § 2.A, ¶ 1	4/5/16	Recommend removing the portion of the sentence speculating that minor freeboard deficiencies will be eliminated through hydrologic analysis. While I agree with the statement, it strays from summarizing deficiencies identified through the PIR. A similar statement appears in the second paragraph.	Jesse Patchett / Wood Rodgers	4/12/16	The requested informaiton has been deleted	x		Y	5/3/2016				
4	Eric Nagy / MBK	Page 2, § 2.A, ¶ 2	4/5/16	The third sentence in this paragraph is unclear and requires revision. Consider replacing "levee rehabilitation" with "levee deficiencies".	Jesse Patchett / Wood Rodgers	4/12/16	This sentence has been revised as requested	х		Y	5/3/2016				
5	Eric Nagy / MBK	Page 3, § 2.A, ¶ 1	4/5/16	The mention of erosion as a noted deficiency in the area of high ground seems to warrant a discussion similar to that of waterside slope stability. The reader needs to understand why we care about erosion in an area of high ground.	Jesse Patchett / Wood Rodgers		More information has been added to expand on why erosion is a concern in this area.	x		Y	5/3/2016				
6	Eric Nagy / MBK	Page 3, § 2.B	4/5/16	While the bulkhead does protect the Port facilities from high water, it also provides protection to the floodplain north of the Port as well as much of Southport. Recommend replacing the word "Port" with "City" in the second sentence.	Jesse Patchett / Wood Rodgers	4/12/16	This section has been updated to reflect information contained in the Bulkhead TM.	x		Y	5/3/2016				
7	Eric Nagy / MBK	Page 4, § 2.D, ¶ 1	4/5/16	Recommend describing the nature of the geometry deficiency for which we would seek a variance. Also recommend stating that the design was approved by a panel of "Independent External Peer Reviewers".	Jesse Patchett / Wood Rodgers	4/12/16	This requested information has been added.	x		Y	5/3/2016				
8	Eric Nagy / MBK	Page 5, § 2.F, ¶ 2	4/5/16	In the last sentence, revise "high water stages in the river" to "high water stages in the bypass."	Jesse Patchett / Wood Rodgers	4/12/16	The requested revision has been made	х		Y	5/3/2016				
9	Eric Nagy / MBK	Page 5, § 2.F, ¶ 3	4/5/16	This discussion regarding freeboard and wind-wave study for bypass levees should include a brief statement regarding the corresponding ULDC requirements on this topic.	Jesse Patchett / Wood Rodgers	4/12/16	This requested information has been added.	x		Y	5/3/2016				
10	Eric Nagy / MBK	Page 6, § 2.G, ¶ 1	4/5/16	Recommend including a brief description of the flood event and breach scenario that results in the freeboard deficiency.	Jesse Patchett / Wood Rodgers	4/12/16	This requested information has been added.	х		Y	5/3/2016	Page 1 of 4

	Internal Team Comments												
			REVIEWER	2			RESPONDENT					REV	IEWER
COMMENT NUMBER	REVIEWER NAME/ AGENCY	LOCATION IN REPORT/DOC	DATE OF ORIGINAL REVIEW COMMENT MM/DD/YY	ORIGINAL REVIEW COMMENT	RESPONDENT CONTACT INFO	DATE OF RESPONSE MM/DD/YY	RESPONSE	CONCUR	NON-CONCUR FID	CARRY FORWARD	CLOSED Y / N	DATE MM/DD/YY	BACK CHECK COMMENT (Needed Only If NOT Closing Comment)
11	Eric Nagy / MBK	Page 7, § 2.H, ¶ 1	4/5/16	Recommend briefly describing assumptions made regarding landslide dredge disposal cells along much of this levee for the seepage analysis. Assume all existing material remains in place or is harvested to support future dredging.	Jesse Patchett / Wood Rodgers		The PIR/AAR deficiencies noted were based on an assumption that the channel-side dredge spoils would be left in place, and therefore be effectively acting as a seepage berm. These conclusions were based on existing available evaluations, some of which assumed spoils would be removed beyond a levee prism and to a set bottom elevation (no seepage berm), and some of which assumed spoils would be left in place (seepage berm). Most mitigation recommendations identify an underseepage deficiency for the DWSC West Levee and therefore include limitations on removal of this material, effectively leaving this material to act as a seepage berm. This will be clarified in the text.	x			Y	5/3/2016	
12	Eric Nagy / MBK	Page 7, § 2.1, ¶ 1	4/5/16	Recommend including a brief description regarding why erosion is a concern along this reach. The concern is somewhat counterintuitive based on the low velocities. Is the concern boat wake or wind-wave driven?	Jesse Patchett / Wood Rodgers		This sentence was in error. Erosion issues in this levee were localized due to scour at existing pipe outlets. This sentence has been revised to indicate that erosion was only identified in a few localized areas.	x			Y	5/3/2016	
13	Eric Nagy / MBK	Page 8, § 2.J	4/5/16	Recommend clearly describing how much of this reach has an existing levee and how much will require the construction of a new levee. This is important context for understanding the limited coverage associated with the geotechnical analysis and inspection results.	Jesse Patchett / Wood Rodgers	4/12/16	This requested information has been added.	x			Y	5/3/2016	
14	Eric Nagy / MBK	Pages 9-12, § 3.A.1		Recommend reorganizing this section with subsections to clearly distinguish between different cutoff wall (1) compositions, (2) construction techniques, and, (3) locations. All three variables are currently blended together with a large introduction to the topic. The description for each variable in each subsection should be limited to concepts relative to that subsection. For example, mobilization is much more significantly tied to construction method than wall type.	Jesse Patchett / Wood Rodgers	4/12/16	The requested revision has been made	x			γ	5/3/2016	
15	Eric Nagy / MBK	Pages 9-12, § 3.A.1		The information presented in this section lends itself to presentation through a table. For example, construction methods variables like unit price, depth limitations, mobilization costs, and required working platform width can be easily compared in a tabular format.			A table has been developed and included for ease of comparison.	x			Y	5/3/2016	
16	Eric Nagy / MBK	Page 11, § 3.A.1	4/5/16	Recommend including a section describing CSM in a manner similar to DSM and TRD.	Jesse Patchett / Wood Rodgers	4/12/16	A description of CSM has been added to the report.	x			Y	5/3/2016	
17	Eric Nagy / MBK	Page 12, § 3.A.2		The width of a seepage berm is a key factor in determining the cost of implementation. Recommend including a brief description of minimum and maximum berm width and how it is determined.	Jesse Patchett / Wood Rodgers		We will add information regarding seepage berm widths which will include the ULDC guidelines for a minimum seepage berm width equal to four times the Minimum Top of Levee (MTOL), and generally a maximum seepage berm width equal to 300 feet. We will further add information on the assumed seepage berm width, as applicable.	x			Y	5/3/2016

COMMENT NUMBER	REVIEWER NAME/ AGENCY	LOCATION IN REPORT/DOC	DATE OF ORIGINAL REVIEW COMMENT MM/DD/YY	ORIGINAL REVIEW COMMENT	RESPONDENT CONTACT INFO	DATE OF RESPONSE MM/DD/YY	RESPONSE	CONCUR	NON-CONCUR	CARRY FORWARD	CLOSED Y / N	DATE MM/DD/YY	BACK CHECK COMMENT (Needed Only If NOT Closing Comment)			
				The extended discussion on relief well O&M seems out of context and inappropriate in this section. The topic of O&M is not addressed for any other measure in this section. Recommend removing this section and simply stating that "Due to water quality permitting, operations and maintenance, and vandalism concerns, relief wells are only considered as a seepage remediation measure in limited circumstances where cutoff walls and berms are impractical."	Jesse Patchett /											
18	Eric Nagy / MBK	Page 13, § 3.A.4	4/5/16	Levee raises typically favor a landslide expansion of the levee footprint in order to avoid impacts to conveyance. This section should note that waterside expansion of the levee footprint will be considered where hydraulic and environmental analysis permits.	Wood Rodgers Jesse Patchett / Wood Rodgers		The requested revision has been made The requested information has been added	x			Y	5/3/2016				
20	Eric Nagy / MBK	Page 19, § 3.G	4/5/16	Is additional ROW also estimated in locations where significant slope flattening is required to address geometry or slope stability deficiencies?	Jesse Patchett / Wood Rodgers		Yes, ROW acquisitions extended 20' beyond needed improvements. However, for waterside slope flattening, this would fall within the levee prism and is therefore ROW is assumed to already be held in these areas. Land acquisition needs have been added to each of the typical improvement figures.			ĸ	Y	5/3/2016				
21	Eric Nagy / MBK	Page 20, § IV, ¶ 2	4/5/16	Assuming removal and off-site disposal of the 20% of in-situ material determined to be unsuitable may not be reasonable. Most projects find a legitimate way to "lose" this material within the project site.	Jesse Patchett / Wood Rodgers	4/12/16	Assuming 20% disposal seems reasonable for most levees in the evaluation. The exception being the DWSC West Levee, where there appears to be ample room to "lose" material. This assumption will be 0% for this levee.			x	Y	5/3/2016				
22	Eric Nagy / MBK	Page 21, § V, General Comment	4/5/16	Overall, the descriptions and discussion included in this section is strongly biased toward only seepage remitting measures. The individual criteria description need to be presented in a manner where the reader can understand how they are applied in the decision between measures for any deficiency type.	Jesse Patchett / Wood Rodgers		Seepage is the primary consideration for the evaluation criteria since seepage measures typically drive costs for a remediation measure project. Information on erosion will also be provided in the context of each criteria.		X		Y	5/3/2016				
23	Eric Nagy / MBK	Page 22, § V.C	4/5/16	If effectiveness is considered equally across all measures, why is it included as a criteria?	Jesse Patchett / Wood Rodgers		In some instances, mitigation measures can be applied that are intuitively less effective (or robust). For example, waterside clay blankets can be an effective method for mitigating through seepage, but in comparison to a seepage cutoff wall (in Wood Rodgers opinion), they are less robust. If such a measure had been proposed for this analysis, it would have been rated as less effective. This is a valid comment, but we suggest that it remain a consideration even though in this case all are considered equal.			×	Y	5/3/2016				
24	Eric Nagy / MBK	Page 23, § VI.A.1.a	4/5/16	Is the CB wall only required where North Harbor Boulevard is coincident with the levee crown or is this approach assumed for the entire segment?	Jesse Patchett / Wood Rodgers		The CB wall approach is currently considered for the entire reach.			x	Y	5/3/2016	Page 3 of 4

25	Eric Nagy / MBK	Page 23, § VI.A.1.a	4/5/16	Is erosion an issue identified in the PIR along this segment?	Jesse Patchett / Wood Rodgers		Erosion deficiencies identified in this reach are due to being on the outside bend of the river as this represents an increased erosion risk. However, since the theoretical ULDC prism fits within the existing embankment and slope stability was not identified as an issue, RSP was not determined to be necessary in this reach.			x	Y	5/3/2016	
26	Eric Nagy / MBK	Page 23, § VI, General Comment	4/5/16	Recommend revising seepage remediation descriptions by including the levee crown height in order for the reader to understand the anticipated cutoff wall depth within a particular segment. Alternatively, the estimated wall invert elevations could be replaced with estimated wall depth.	Jesse Patchett / Wood Rodgers	4/12/16	Cutoff wall depth will be added to the text.	X			Y	5/3/2016	
27	Eric Nagy / MBK	Page 43, § VI.H.7.a	4/5/16	Considering revising 1st sentence in the 1st paragraph to more clearly introduce this alternative.	Jesse Patchett / Wood Rodgers	4/12/16	The requested edit has been made.	x			Y	5/3/2016	
28	Eric Nagy / MBK	Page 43, § VI.H.7.a	4/5/16	Recommend providing an explanation for the statement, "Landslide borrow restrictions to address under seepage issues".	Jesse Patchett / Wood Rodgers	4/12/16	At present, underseepage and some through seepage are mitigated by an unofficial berm created by the dredged spoils which therefore acts as a stability berm/seepage berm. The ULE evaluations showed that modeled removal of this material often led to high exit gradients, and existing explorations suggest that it may also lead to unacceptable through seepage in some locations. The ULE mitigation recommendations (SWS GER volume 2) analyzed each cross- section with a specific limited removal of this material effectively leaving material in place to act as a berm (in conjunction with other mitigation components) and found a planning-level limitation that provided adequate protection against underseepage. Per Comment 11, this information will be included in Section II.2.H of the text, and will not be repeated in this section.	X			Y	5/3/2016	
29	Eric Nagy / MBK	Page 57, § VI.K.2.b	4/5/16	The description of this alternative indicates that the storage tank is in conflict with the proposed berm footprint; however, it does not indicate how that conflict is resolved through implementation of the alternative.	Jesse Patchett / Wood Rodgers	4/12/16	The storage tank would be ~15' from the new toe, so it is possible that it could remain. A sentence noting that slightly shifting the freeboard improvement waterward could eliminate the need to relocate/modify the existing fence.	v			Y	F (2) (201)

Jesse Patchett Wood Rodgers	4/21/16	The requested information will be included.	x			Y	5/7/2016	
		II. Summary of Identified System		States the geotechnical deficiencies were determined with current levee grade and did not include any "levee raises for freeboard deficiencies". Would more	Jesse Patchett		Generally, we do not feel that more deficiencies would be identified where levee raises are proposed since most levees raises are for freeboard criteria (i.e. most of the levees contain the DWSE). The exception was the Port levees. For the Port levees, freeboard mitigation was considered. For levees outside of the Port, the team believes that, while it is possible that additional levee height could lead to additional stability deficiencies, we expect that most if not all could be mitigated via the freeboard mitigation						
5	IPE	II. Summary of Identified System Deficiencies. A. Sacramento River West North Levee	4/17/2016	have been determined if they had? When will the "future modifications to the baseline 200-year Flood Program" be made? Would this help much with the seepage problems (here and other places) since the HTOL would be affected?	Wood Rodgers Jesse Patchett Wood Rodgers	4/21/16	design. The current PIR and AAR were developed using information from previous studies (i.e. ULE/NULE, GRR, etc.). No new explorations or analysis were conducted. Additionally, the DWSE used was based on the Comp Study Hydrology. WSAFCA anticipates having the team perform additional geotechnical exploration and evaluations in order to confirm, refine, and/or reduce currently recommended seepage and stability remediation measures. Finally, updating the freeboard evaluation using the CVHS hydrology may reduce the DWSE. Early on in the project, the client requested that the team track where additional exploration and analysis using updated information could have the potential to reduce estimated Flood Program Costs.		x			5/7/2016	
7	IPE	II. Summary of Identified System Deficiencies, A. Sacramento River West North Levee.	4/17/2016	We would hope that if the freeboard is low 6 to 8 inches, these would be corrected. If the 6 to 8 inches are other geometry issues, good engineering judgment and maybe "exceptions" be utilized if the levee can be document as adequate. Therefore, eliminating a levee modification.	Jesse Patchett Wood Rodgers	4/21/16	Even for areas of minor freeboard deficiencies, improvements and associated costs are included in the recommended plan. As noted in the previous comment, the client asked the team to track items that could potentially be eliminated. Since the team understands CVHS may reduce the DWSE, we highlighted areas with minor freeboard deficiencies to understand cost impacts due to future evaluations and analysis.		x			5/19/2020	
8	IPE	II. Summary of Identified System Deficiencies, A. Sacramento River West North Levee	4/17/2016	In the second paragraph. The first two sentences are confusing and should be rewritten	Jesse Patchett Wood Rodgers	4/21/16	These will be rewritten to reduce confusion.	x			Y	5/7/2016

		II. Summary of Identified System Deficiencies, A. Sacramento River		It states "identification of a waterside rapid drawdown slope stability deficiency is dependent on the location of the assumed theoretical levee template." Please	Jesse Patchett		If the levee template waterside slope is located immediately adjacent to the existing waterside slope, a waterside rapid drawdown slope instability could encroach into the existing levee template. If ongoing slope failures are not repaired, the waterward slope will progressively move landward, thereby continually moving the location of the theoretical levee prism					The last sentence is	Please see the updated last sentence in red. If the levee template waterside slope is located immediately adjacent to the existing waterside slope, a waterside rapid drawdown slope stability deficiency would be identified as slope failure could encroach into this levee template. If the template is located further inland, then a rapid drawdown deficiency would not currently be identified. However, if a slope failure occurs and is not repaired, the waterside slope will progressively move landward, and potentially encroach on the landward template. To summarize, if the waterside slope levee template is located within approximately 5 feet of the existing waterside slope, a rapid drawdown slope stability deficiency will be identified and the slopes will require slope flattening. If the template is located unland, BCI would after high water events to maintain the existing waterside slope
9	IPE	West North Levee	4/17/2016	elaborate on these locations.	Wood Rodgers	4/21/16	within the existing wide embankment.	x		Y	5/19	/2020 confusing	location. We can add this verbiage to the document.
10	IPE	II. Summary of Identified System Deficiencies, A. Sacramento River West North Levee	4/17/2016	Third paragraph. Are the seepage issues through or under or both?	Jesse Patchett Wood Rodgers	4/21/16	The text states "Seepage issues were not identified downstream of the Tower Bridge (Station 215+30)" Neither through seepage nor underseepage issues were identified downstream of Sta 215+30. This will be clarified in the text.		x	Y	5/7,	Comment closed pending 2016 confirmation in report.	n/a
11	IPE	II. Summary of Identified System Deficiencies, A. Sacramento River West North Levee	4/17/2016	It states "Future iterations of the AAR may reconsider this approach and defer them to long-term maintenance items." Who and how will this be determined?	Jesse Patchett Wood Rodgers	1	We expect that the design team, MBK, WSAFCA, the City, and the LMA would be the ones to collaboratively make this decision in the future. This one another area of possible Flood Program cost reductions, and was added at the request of the client.		x	Y	5/7,	2016	n/a
12	IPE	II. Summary of Identified System Deficiencies, A. Sacramento River West North Levee	4/17/2016	Third paragraph. What about just looking at the location of the theoretical levee template?	Jesse Patchett Wood Rodgers	4/21/16	The theoretical levee prism is contained within the embankment at this location. Slope stability issues were identified due to steep slopes.		x	Y	5/7,	2016	n/a
13	IPE	II. Summary of Identified System Deficiencies, A. Sacramento River West North Levee	4/17/16		Jesse Patchett Wood Rodgers	4/21/16	This section presents deficiencies. Remediation measures are described elsewhere in the report.	x		Y	5/7,	Comment closed pending 2016 confirmation in report.	n/a
14	IPE	II. Summary of Identified System Deficiencies, A. Sacramento River West North Levee		Fifth paragraph. References another report to look at "assessment ratings" for this area. Could a brief summary of these assessment ratings be included in this paragraph? States that the evaluation is "on going" and the IPE	Jesse Patchett Wood Rodgers	4/21/16	Information on the ratings will be included in III.E.	x		Y	5/7,	Comment closed pending 2016 confirmation in report.	n/a

	19	IPE	II. Summary of Identified System Deficiencies, C. Sacramento River West South Levee	4/17/2016	It states the freeboard deficiency "may be eliminated during future analyses." Is this because of the possible change in hydrology?	Jesse Patchett Wood Rodgers	4/21/16	Yes. The design team believes using CVHS models could reduce the DWSE, thereby potentially reducing and/or eliminating some freeboard deficiencies. However, this sentence (and others like it) have been removed throughout at the request of the client.		x	Y	5/7/2016	C c S e d tl
	20	IPE	II. Summary of Identified System Deficiencies, D. Sacramento Bypass South Levee	4/17/2016	This paragraph seems to imply that because this group has looked at this "deficiency" and passed it, its ok. A more substantial reason should be provided. If this sentence is left in, a comma should be added after (CVFPB).	Jesse Patchett Wood Rodgers	4/21/16	The team has reviewed the entire Sacramento Bypass South Levee and has concluded only 285 feet are deficient. This paragraph states "The results of this evaluation indicate that the Sacramento Bypass South Levee mostly meets seepage, stability, freeboard, and erosion criteria. The only remaining deficiencies include a through and underseepage issue in the eastern-most 285 feet of the levee." The requested comma has been added.	x		Y	5/7/2016	C
	21	IPE	II. Summary of Identified System Deficiencies, D. Sacramento Bypass South Levee	4/17/2016	It says "variance" in the first paragraph. Wouldn't it be an "exception" to ULDC? It may be variance for CVFPB but is this for compliance to CVFPB or ULDC? This and in other places.	Jesse Patchett Wood Rodgers	4/21/16	Exception will replace variance throughout.	x		Y		C
	22	IPE	II. Summary of Identified System Deficiencies, D. Sacramento Bypass South Levee.	4/17/2016	States there are "high-hazard" encroachments within this reach, but does not describe what they are.	Jesse Patchett Wood Rodgers	4/21/16	Information will be included specifying the hazards	x		Y	5/7/2016	C c
	23	IPE	II. Summary of Identified System Deficiencies, E. Training berm	4/17/2016	It says "the berm appears to be important for hydraulic reasons" You don't know for sure but then say "determining its susceptibility to erosion is important."	Jesse Patchett Wood Rodgers	4/21/16	That is correct. The team does not know the purpose of the training berm for sure, therefore it is important for us to determine its susceptibility to erosion. In this way, we are erring on the side of caution and recommending improvements, rather than not.		x	Y	5/7/2016	
	24	IPE	II. Summary of Identified System Deficiencies, F. Yolo Bypass East Levee.	4/17/2016	This refers to "Reference 7". Suggest using document name and reference number.	Jesse Patchett Wood Rodgers	4/21/16	The requested information will be included	x		Y	5/7/2016	C
	25	IPE	II. Summary of Identified System Deficiencies, H. DWSC West Levee.	4/17/2016	States a "gas line at the levee toe is a "moderate hazard" and in other section, a "fiber optics line" is "high-hazard". Why the difference?	Jesse Patchett Wood Rodgers		Please refer to the PIR for a detailed discussion on how low, moderate, and high hazard encroachments and penetrations were defined. As noted previously, a very brief discussion on this will be included in the Final AAR, with a reference to the PIR for more details.		x		5/7/2016	С
	26	IPE	III. Alternatives Considered, A. Seepage and Stability Mitigation Measures 1. Cutoff Walls	4/172016	In the second paragraph, 3 reasons to require a ½ degrade are listed. None of these 3 reasons make "good engineering sense". A 1/3 degrade has been shown to work and is much cheaper for the levee owners. If engineers still believe a ½ degrade is required, computations should be provided to backup their opinion for review.	Jonathan Kors Wood Rodgers	4/21/16	In the not to distant past, 1/2 levee degrade was performed for SB wall construction for the reasons noted in the report. It is correct that more recently projects have shifted to 1/3 levee degrade at a cost savings. We concur that this will likely be the case for this program. However, elevated risk for constructing with a 1/3 levee degrade remains. Considering a half levee degrade in the analysis now is a conservative assumption that can be modified if appropriate in later phases.		x	Y	5/25/2016	C "I
	27	IPE	III. Alternatives Considered, A. Seepage and Stability Mitigation Measures 1. Cutoff Walls.	4/17/2016	The Dewind "One Pass" type wall should also be listed it is currently in other local (Sacramento) P&S.	Jonathan Kors Wood Rodgers	4/21/16	A description of this equipment has been added.	x		Y	5/7/2016	C c

28	IPE	III. Alternatives Considered, SCB Cutoff Walls	4/17/2016	These type walls as described here should not be proposed or used. They can be dangerous and can pose a public safety issue.	Jonathan Kors Wood Rodgers	4/21/16	Wood Rodgers does not agree that SCB walls are dangerous or pose a public safety issue. Many exist in the the Sacramento region and are not classified as a risk by the USACE/CVFPB/DWR or other agency responsible for levee safety. The construction of SCB walls does require an appropriate level of quality control and quality assurance to ensure they are constructed properly. Given their use in the region, it is appropriate to discuss them here. They are not proposed for the City's Flood Program other than where walls are to be constructed to depths greater than 75 feet where the DSM method would be used.			Y	5/25/2016	W to op re Th be pr co be th re
29	IPE	III. Alternatives Considered, CB Cutoff Walls	4/17/2016	The statement about "intermediate panels" is not correct. Do panels require "trimming" also? Cost are way out of line.	Jesse Patchett Wood Rodgers	4/21/16	In Wood Rodgers' experience, CB walls have been constructed as described in the report. Unit costs cited for CB walls come from actual projects in northern California, as well as discussions with an experienced CB wall contractor.			Y	5/25/2016	V ir N ci p ai
30	IPE	III. Alternatives Considered, Waterside Versus Levee Centerline Cutoff Wall Installation	4/17/2016	States, "Existing levee excavation and reconstruction quantities are higher (versus typical degrading for a levee centerline installation). Explain why this is true.	Jesse Patchett Wood Rodgers	4/21/16	This sentence has been revised to indicate excavation and reconstruction quantities vary in relation to a typical degrade, depending on the degrade height used		x	Y	5/7/2016	
31	IPE	III. Alternatives Considered, Relief Wells.	4/17/2016	PVC screens should be added and concrete-lined ditches are not always required.	Jesse Patchett Wood Rodgers	4/21/16	Details regarding relief well O&M have been removed at the request of the client since these were not considered a suitable alternative. Therefore, this text has not been included in the revised AAR.		x	Y	5/7/2016	C
32	IPE	III. Alternatives Considered, Relief Wells, Periodic Maintenance	4/17/2016	It is not required to run a camera down well yearly. It would only be required if the well was found to be producing sands. Only a percentage of the well field should be pumped every year in a manner so that each is pumped on a 5 year interval. Well may only need jet washing without chemicals.	Jesse Patchett Wood Rodgers	4/21/16	Details regarding relief well O&M have been removed at the request of the client since these were not considered a suitable alternative. Therefore, this text has not been included in the revised AAR.		x	Y	5/7/2016	C
33	IPE	VI. Alternatives Analysis, A. Sacramento River West North Levee 2. Reach 2 (Station 71+00 to Station 101+00).	4/17/2016	What are the USACE identified unacceptable utilities?	Jesse Patchett Wood Rodgers	4/21/16	electrical conduits, vaults, fire hydrants, and irrigation lines. For more information, please see the Penetration and Encroachment Assessment included		x	Y	5/7/2016	Co
34	IPE	VI. Alternatives Analysis, Reach 3	4/17/2016	First sentence says a cutoff wall could be constructed then last sentence says it will not work. Why?	Jesse Patchett Wood Rodgers	4/21/16	The first sentence will be revised to clarify that a cutoff wall is an alternative, since homes on the levee make construction of a cutoff wall in this area infeasible.	x		Y	5/7/2016	С
35	IPE	VI. Alternatives Analysis, Reach 6, Alternative 2.	4/17/2016	Do the designers know it would take a 150 ft berm? What about wells?	Jesse Patchett Wood Rodgers	4/21/16	Based on available information, the designers feel a 150-foot wide berm is reasonable for cost estimating purposes. Future geotechnical evaluations will be required to determine the recommended berm width. Due to the water quality permitting needs, increased operation and maintenance responsibilities, and potential impacts to pump stations and internal drainage facilities, relief wells were not identified as a preferred seepage remediation measure in the AAR.		X	v	5/7/2016	Ca
36	IPE	VI. Alternatives Analysis, Reach 9, B	4/17/2016	The IPE should be notified when the information on the Barge Canal Bulkhead is added.	Jesse Patchett Wood Rodgers		During a meeting with WSAFCA and MBK on 4/20/16, it was decided that the Bulkhead TMs would not be reviewed by the IPE at this time.		x	Y	5/7/2016	

EVIEWER	RESPONDENT
BACK CHECK COMMENT (Needed Only If NOT Closing Comment)	BACK CHECK RESPONSE
Wood Rodgers should talk to Rich Millet and ask his opinion and if he would recommend these walls. These walls have been used before designers discovered problems with their construction. So just because they were used in the area in the past is no reason to discuss them as a	Text in this section will be updated to include information that
"possibility".	these walls are unlikely to be used bsaed on costs.
Wood Rodgers should investigate this further. Most times CB walls are constructed as SB walls, not panels. A. V. Watkins Dam and Dallas Floodway are great examples.	Text in this section will be updated to indicate these wall can also be constructed using an open trench method.

37		VI. Alternatives Analysis, Reach 9, C	4/17/2016	Should the deficiencies in Reaches 1, 2, and 3 be listed?	Jesse Patchett Wood Rodgers	4/21/16	Reach 1 - measures to address known deficiencies are nearing construction and are therefore not included in the AAR. Reach 2 - no identified deficiencies. Reach 3 - minor freeboard deficiencies are described.		x		5/7/2	S 2016 r
38	IPE	30. VI. Alternatives Analysis, Reach 9, D	4/17/2016	A better reason for a variance acceptance should be given. The last paragraph is unclear.	Jonathan Kors Wood Rodgers	4/21/16	We are assuming that because the USACE reviewed and ultimately provided a 408 permit for the EIP Project even though it does not meet geometry standards, we are confident that we will not need to modify existing, geotechnically stable slopes simply to meet geometry standards. We believe this to be an appropriate assumption.		x		<u>( 5/7/2</u>	2016
39	IPE	VI. Alternatives Analysis, Reach 9, F. Yolo Bypass East Levee, Reach 7.	4/17/2016	States the "fiber-optic line was found to be unacceptable". What is the failure mode for this?	Jesse Patchett Wood Rodgers	4/21/16	This was the rating provided in the USACE PI.		x		r 5/19/	2 <b>020</b> o
40	IPE	VI. Alternatives Analysis, Reach 9, F. Yolo Bypass East Levee, Reach 9	4/17/2016	This relative narrow seepage berm makes the IPE question the very deep cutoff wall.	Jesse Patchett Wood Rodgers	4/21/16	The team assumed a minimum-width seepage berm. However, a seepage berm may not address the failing exit gradient calculated at the landside ditch as shown in previous studies. For these reasons, the seepage berm was considered infeasible and was not advanced in the AAR.		x		( 5/7/:	0 2016 c
41	IPE	VI. Alternatives Analysis, Reach 9, G. South Cross Levee, Alternative b	4/17/2016	selected plan. Why pay so much more for the other plan?	Jesse Patchett Wood Rodgers	4/21/16	The client prefers the cutoff wall option due to sensitivities with landowners in this area.		x		5/7/2	2 <b>016</b> r
42	IPE	VI. Alternatives Analysis, Reach 9, H. DWSC West Levee, Reach 2	4/17/2016	Why is a gas line a low hazard, but a fiber optics line is a high hazard?	Jesse Patchett Wood Rodgers	4/21/16	The gas line in this reach was identified as a moderate hazard in the USACE PI since it does not penetrate the levee.		x		( 5/19/	2020 li
43	IPE	VI. Alternatives Analysis, Reach 9, H. DWSC West Levee, Reach 7	4/17/2016	Because we have never seen a "smart" seepage berm, the word "wise" should be "wide".	Jesse Patchett Wood Rodgers	4/21/16	The requested revision has been made	x			5/7/2	2016 C
44	IPE	VI. Alternatives Analysis, Reach 9, I. DWSC East Levee, Reach 3	4/17/2016	So some fences are high hazard and some are moderate-hazard?	Jesse Patchett Wood Rodgers	4/21/16	The hazard assessment is a function of: location, permit status, and USACE PI rating.		x		( 5/19/	/ <b>2020</b> ra
45	IPE	Figure 3.	4/17/2016	Is the 1V:3H landside slope correct?	Jesse Patchett Wood Rodgers	4/21/16	Yes. Our typical levee raising includes 3H:1V landside slopes.	x			( 5/7/2	2016
45	IPE	Figure 4.	4/17/2016	Where did the "30 foot" minimum come from? This requires a large excavation into the levee.	Jesse Patchett Wood Rodgers		The 30 foot dimension is the required width for an excavator to construct the waterside toe cutoff wall. This measure was not included in any alternative, so the dimensions do not impact the results of the AAR.		x			2016 C
40	IPE	Figure 5.	4/172016	Why use such a complicated seepage berm? Why not use a cleaner SM?	Jesse Patchett Wood Rodgers		The AAR costs assumed local borrow, which may consist of fine grained material and may therefore require the incorporation of a drainage layer. Future evaluations may modify this detail.		x		( 5/7/2	
48	IPE	Figure 6		If the "Levee Embankment fill" is clay, is this drained berm necessary?	Jesse Patchett Wood Rodgers		The levee embankment fill may not be completely comprised of clay. Including a drained berm at this planning stage is appropriate for conservative cost estimating purposes.		x			2016 C

59	IPE	II. Summary of Identified System Deficiencies, Para. D SBS Levee, p. 4	4/18/16	List Stationing with eastern-most 285ft. Why are there two high-hazard encroachments and three high- hazard penetrations after the EIP? Are these misidentified?	Jesse Patchett Wood Rodgers	4/21/16	Stationing will be cited for the 285 feet; the EIP didn't address the entire SBSL, so encroachments and penetrations are still identified in the USACE PI near Harbor Blvd.		x	Y	5/7/2016	
60	IPE	II. Summary of Identified System Deficiencies, Para. F Yolo Bypass East Levee, p. 6	4/18/16	Question: what is the rational behind the required 4H to 1V required for waterside slope in the ULDC? This seems arbitrary and unnecessary.	Jesse Patchett Wood Rodgers	4/21/16	California Title 23 requires bypass levees to have 4H:1V waterside slopes.		x	Y	5/25/2016	Y S t
61	IPE	II. Summary of Identified System Deficiencies, Para. G South Cross Levee, p. 6	4/18/16	Explain why this levee should be considered. Is this because the DWSC East Levee is not considered?	Jesse Patchett Wood Rodgers	4/21/16	The South Cross Levee is a dryland levee that protects the City in the event of a levee failure of the Sacramento River West South Levee south of the SCL. It also protects the City in the event of a failure of the DWSC East Levee, south of the City.		x	Y	5/7/2016	s
62	IPE	II. Summary of Identified System Deficiencies, Para. H DWSC West Levee, p. 7	4/18/16	It would be helpful to explain why the DWSC West Levee is considered south of Station 170+00 but the DWSC East Levee is not evaluated? How was the apparent arbitrary ending point of Station 1000+00 selected?	Jesse Patchett Wood Rodgers	4/21/16	The DWSC West Levee is essentially the east levee of the Yolo Bypass. MBK has determined that a breach anywhere in the DWSC West Levee down to Miner Slough (approx. Station 1001+00) would allow water from the Yolo Bypass to enter the Deep Water Ship Channel and the resulting backwater could flood the Port (and significant portions of the City). This evaluation does not need to be performed for the DWSC East Levee since the South Cross Levee protects the City from a failure of this levee (and the Sac River West South Levee) south of the City. This will be clarified in the text.			Y	5/7/2016	Si
63	IPE	II. Summary of Identified System Deficiencies, Para. K Port South Levee, p. 8	4/18/16	State which USACE and DWR inspections - vegetation, encroachment and penetrations?	Jesse Patchett Wood Rodgers	4/21/16	The requested information will be added	x		Y	5/7/2016	С
64	IPE	III. Alternatives Considered Para. A Seepage and Stability Mitigation Measures, 1. Cutoff Walls, p. 9	4/18/16	It is typical to construct cutoff walls either at the levee centerline or waterward of the levee centerline?	Jesse Patchett Wood Rodgers	4/21/16	Yes		x	Ŷ	5/19/2020	
65	IPE	III. Alternatives Considered Para. A Seepage and Stability Mitigation Measures, 1. Cutoff Walls, p. 10	4/18/16	Suggest that SB Cutoff Walls be discussed first - least expensive and most often used - before SCB Cutoff Walls. State a "minimum" 36-inch-wide trench. First two sentences under the SCB Cutoff Walls section are confusing. State issue with cracking of SCB walls in comparison to SB Cutoff Walls.	Jesse Patchett Wood Rodgers	4/21/16	The requested revision has been made	x		Y	5/7/2016	C
66	IPE	III. Alternatives Considered Para. A Seepage and Stability Mitigation Measures, 4. Relief Wells, p. 13	4/18/16	In 6th bullet does "swabbing" mean surging	Jesse Patchett Wood Rodgers	4/21/16	Swabbing refers to the process used to remove drilling fluids and other materials from the gravel pack. BACK CHECK COMMENT (Needed Only If NOT Closing Comment)	BACK CHECK RESPONSE
Comment closed pending confirmation in report.	n/a
Yes we know but why - is this reasonable?	The AAR considers mitigation measures that would be compliant with ULDC and Title 23 criteria. Evaluating the rational and reasonableness of ULDC and Title 23 criteria is beyond the scope of this AAR. If variances to these criteria can be supported with information obtained from future explorations and evaluations, the team may consider pursuing these, as appropriate at that time.

97	IPE	IV. Alternatives Analysis Para. J Port North Levee, 2 Reach 2, p. 52,		Discuss "nuisance" seepage issue in Reach 2 in more detail. Is it worth spending many dollars on	Jesse Patchett	4/21/46	Recommendations for Port levees assume raised levees would be loaded. Since information is limited in this area, the extent of seepage resulting from raised levees or floodwall improvements is not currently known. However, available subsurface explorations indicate nuisance seepage may occur. To develop a conservative Flood Program cost estimate, we assumed that the identified potential for "nuisance" seepage could, in the future, detrimentally impact the levee with successive seepage immediately under the levee and exiting at or near the levee toe. We therefore included mitigation costs for this seepage. This is expected to be evaluated in further detail in				5/7/	Comment closed pending	n/a

The schematic water surface will not be added as discussed in the response to comment 119. A breakline will be added. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C	
	153	IPE	Appendix B, DWSC West Levee, Station 692+00, Figure 13 of 16	4/19/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C	
	154	IPE	Appendix B, DWSC West Levee, Station 692+00, Figure 14 of 16	4/19/16	Label Stability Berm. If filter sand is being used what is the purpose of the geotextile? What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The stability berm will be labelled. The schematic water surface will not be added as discussed in the response to comment 119. The filter sand is below the drain rock, the geotextile is above it. The type of cutoff wall will be specified on these		x	_	Y	5/7/2016	C ci	
	155	IPE	Appendix B, DWSC West Levee, Station712+00, Figure 15 of 16	4/19/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	figures. The schematic water surface will not be added as discussed in the response to comment 119. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C	
	156	IPE	Appendix B, DWSC West Levee, Station 840+00, Figure 16 of 16	4/19/16	What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The schematic water surface will not be added as discussed in the response to comment 119.	x			Y	5/7/2016		
	157	IPE	Appendix B, DWSC East Levee, Station10+00, Figure 1 of 5	4/19/16	The type of cutoff wall is not defined. It would be to have dimensions on clay cap and clay fill above. Need break line across cutoff wall since it goes below EI -20. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. A breakline will be added. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C	
	158	IPE	Appendix C, DWSC East Levee, Station 54+00, Figure 2 of 5	4/19/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. Need break line across cutoff wall since it goes below EI -20. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. A breakline will be added. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C	
	159	IPE	Appendix B, DWSC East Levee, Station 94+00, Figure 3 of 5	4/19/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. Need break line across cutoff wall since it goes below El -20. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. A breakline will be added. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C	
	160	IPE	Appendix B, DWSC East Levee, Station 104+00, Figure 4 of 5	4/19/16	The type of cutoff wall is not defined. Need break line across cutoff wall since it goes below El -20. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. A breakline will be added. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C c	
	161	IPE	Appendix B, DWSC East Levee, Station 132+00, Figure 5 of 5	4/19/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. Need break line across cutoff wall since it goes below El -20. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. A breakline will be added. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x		Y	5/7/2016	C

164	IPE	Appendix B, Port North Levee, Station 40+00, Figure 3 of 4	4/20/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity. The type of cutoff wall will be specified on these figures. The schematic water surface will not be added		x	Y		Comment closed pending confirmation in report.	n/a
165	IPE	Appendix B, Port North Levee, Station 50+00, Figure 4 of 4	4/20/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	as discussed in the response to comment 119. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x	Y	5/7/2016	Comment closed pending confirmation in report.	n/a
166	IPE	Appendix B, Port South Levee, Station 10+00, Figure 1 of 9	4/20/16	What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The schematic water surface will not be added as discussed in the response to comment 119.	x		Y	5/7/2016		n/a
167	IPE	Appendix B, Port South Levee, Station 70+00, Figure 2 of 9	4/20/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. Need break line across cutoff wall since it goes below EI -20. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. A breakline will be added. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.		x	Y	5/7/2016	Comment closed pending confirmation in report.	n/a
168	IPE	Appendix B, Port South Levee, Station 70+00, Figure 3 of 9	4/20/16	Consider using filter material instead of geotextile under the drain rock in the seepage berm. What about a schematic water surface?	Jesse Patchett Wood Rodgers		Filter material and filter fabric are included in the preliminary sections and cost estimates. The filter sand is below the drain rock, the geotextile is above it- do the estimates include both (two layers each) or just one layer of each? This may be refined during later versions of the AAR or during design. Water surface will not be added as previously discussed.		x	Y		Comment closed pending confirmation in report.	n/a
169	IPE	Appendix B, Port South Levee, Station 117+00, Figure 4 of 9	4/20/16	What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The schematic water surface will not be added as discussed in the response to comment 119.	×		v	5/7/2016		n/a
170	IPE	Appendix B, Port South Levee, Station 120+00, Figure 5 of 9	4/20/16	The type of cutoff wall is not defined. It would be nice to have dimensions on clay cap and clay fill above. What about a schematic water surface?	Jesse Patchett Wood Rodgers	4/21/16	The type of cutoff wall will be specified on these figures. The schematic water surface will not be added as discussed in the response to comment 119. Clay cap dimensions are provided in detail on Figure 3 and are omitted from these sections for clarity.
